DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 17 December 2009 has been entered.

Allowable Subject Matter

Claims 14-19 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's **claim 1** is drawn toward a picture coding apparatus which generates a random access unit as a part of a stream, the random access unit including picture access units each having (i) a coded picture data access unit storing coded picture data, and (ii) a picture parameter set access unit storing a picture parameter set used for decoding the coded picture data, said picture coding apparatus comprising: a coding unit operable to generate the coded picture data by coding a picture; an information generation unit operable to generate the picture parameter set used for decoding the coded picture data; a first storage unit operable to store the coded picture data in the coded picture data access unit; a second storage unit operable to store a predetermined

Art Unit: 2621

number of picture parameter sets including the picture parameter set in a picture parameter set access unit included in a picture access unit located at a head of the picture access units included in the random access unit; and a third storage unit operable to store a picture parameter set which is different from the predetermined number of picture parameter sets stored by said second storage unit, the picture parameter set being stored in a picture parameter set access unit included in a picture access unit that stores coded picture data which refers to the different picture parameter set, wherein the picture parameter set includes at least one of a type of variable length coding method, an initial value of a quantization step, and a number of reference pictures, and an I-picture is stored in the coded picture data access unit included in the picture access unit located at the head.

Applicant's independent **claim 1** comprises a particular combination that is neither taught nor suggested by the prior art. The closest prior art of record, Okada et al (US PgPub 2002/0018643), differs from the claim invention by failing to teach or fairly suggest "...a picture parameter set which is different from the predetermined number of picture parameter sets stored by said second storage unit, the picture parameter set being stored in a picture parameter set access unit included in a picture access unit that stores coded picture data which refers to the different picture parameter set, wherein the picture parameter set includes at least one of a type of variable length coding method, an initial value of a quantization step, and a number of reference pictures."

Applicant's independent **claims 16, and 18-19** contain similar limitations to those discussed in claim 1, and are therefore found allowable in view of the explanation set forth in claim 1 above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
